JS

Lets learn advance javascript concepts

@Nidhi_kurmi

coercion in javascript ?

automatic or implicit conversion of values from one data type to another (such as strings to numbers).Type conversion is similar to type coercion because they both convert values from one data type to another with one key difference — type coercion is implicit whereas type conversion can be either implicit or explicit.

@Nidhi_kurmi

```javascript
const value1 = "5";

const value2 = 9;

let sum = value1 + value2;

console.log(sum);
```
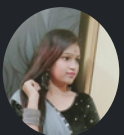

output will we

```js
const value1 = "5"; // string
const value2 = 9;    // number
let sum = value1 + value2; // string concatenation

console.log(sum); // "59"
```

@Nidhi_kurmi

Coercion performs abstract operations behind the scenes, which is why "5" + 9 = "59" gives a weird answer.
